

Wildland fire pump set

For operation in forest and wildland fires

Forest fires of the past years and months have shown their destructive extent around the globe. Unfortunately, it can be assumed that the frequency and extent of damage caused by wildland fires will continue to increase.

In order to be better prepared for these predicted scenarios, Rosenbauer has now added a 3-piece wildland fire pump set to its product portfolio. The three sets are designed in such a way that all equipment for direct firefighting is available at all times, even in rough terrain. The transport is carried out by two people using a specially developed load carrier and a transport backpack in which the necessary equipment can be safely stowed.

Set pump

Part 1 of the set consists of a comfortable load carrier incl.:

- Integrated, self-priming small 4-stroke motor pump
 - output: 1,6 kW
 - max. pressure: 4 bar
 - max. delivery height: 40 m
 - max. grain size: 6 mm
 - max. suction height: 8 m self-priming
 - max. flow rate: 240 l/min.
- 3 m suction hose incl. strainer
- Specially designed adapter plate for safe transport
- Stable lashing device

Weight: 15.8 kg

Dimensions: 78 x 35 x 27 cm

Wildland fire pump set

Set wildland fire hoses and fittings

Part 2 of the set consists of a robust, watertight 30 l transport backpack with wildland fire hoses and fittings:

- 4 x delivery hose Titan Flame 15 m with perforation (= self-protection in the event of embers), Storz D
- Ball valve distributor D - 2 x D
- 2 x D nozzles

Weight: 12.9 kg

Dimensions: 85 x 35 x 22 cm

Set wetting agent

The use of wetting agents significantly increases the extinguishing effect, especially in wildland fires (ground fires, earth fires). Part 3 of the set consists of a robust tool bag incl.:

- Cartridge holder for wetting agent
- 20 cartridges

Weight: 1.7 kg

Dimensions: 35 x 25 x 10 cm
